### **Water and mining: GSNSW current projects and future direction**

***Dr Mark Armstrong, Manager Mineral Resource Assessment, Geological Survey of NSW***

GSNSW collects, manages and delivers geological, geophysical, geochemical and geospatial data to inform the government, resource industry and the community about the state's geology and mineral, coal, petroleum and renewable energy resources. The Survey collaborates with other national and international government and scientific bodies to share skills and data, promote coherent information exchange and facilitate the safe and sustainable development of NSW mineral and energy resources for the benefit of all NSW citizens.

As the custodians of the State's geoscientific data, GSNSW is in a unique position to help characterise the groundwater systems and the potential impact mining may have in those areas. This presentation will provide an insight into the current work and possible future directions GSNSW is taking, in collaboration with DPI Water and Water NSW, on improving the understanding and management of the State's water resources.
