Tuesday 12 June 2018
5.30pm for a 6pm start

WSP office
Ernst & Young Centre
Level 27, 680 George Street, Sydney CBD

****For late arrivals, please phone Peps on 0428936645 for access****

IAH NSW proudly presents a talk by **Ross Best** Senior Principal and Head of Practice – Geotechnical Australia and New Zealand of Coffey Services Australia

Control of groundwater to excavations: barriers and dewatering

Control of groundwater seepage to excavations is important to manage impacts on the surrounding groundwater system and to restrict the volumes of water to be dealt with by treatment systems and for discharge. The presentation will address the assessment of groundwater inflows and impacts and the mitigation measures which may need to be considered.

The use of analytical methods for various aspects of assessment and design will be discussed. While numerical methods have advanced markedly in recent time analytical tools still have a place in the assessment of groundwater aspects of projects.

Ross is a Senior Principal and is the Head of Practice – Geotechnical Australia and New Zealand of Coffey Services Australia. Ross has been based in Sydney for the bulk of his career and has provided groundwater advice on a wide variety of projects ranging for road and rail design and construction projects to building developments.
